

Stop the Spiral to Being OBSOLETE

What can we do to shape our collective future?

Presented by
Bradley Lukanic

CEO - CannonDesign

October 6, 2016

A grayscale photograph of a person with long, curly hair, seen from the back, pointing at a whiteboard. The whiteboard is covered in a complex, hand-drawn diagram with various boxes, lines, and text. The person is wearing a dark long-sleeved shirt. The background is slightly blurred, showing what appears to be a classroom or meeting room setting.

“How will the world be better because of what we do?”

Living in inquiry about the future of design, learning, & community

The Companies Behind LinkNYC

They are expected to bring \$500 million in ad revenue to the City of New York over the next 12 years

<http://silicon.nyc/local-business-advertising-linknyc-wifi/>

LinkNYC is planning on having 7,500 kiosks by 2020 all over the 5 boroughs, neighborhood-targeted advertising has been a core part of LinkNYC's plan

What kind of man owns his own computer?

Rather revolutionary, the whole idea of owning your own computer? Not if you're a diplomat, printer, scientist, inventor... or a kite designer, too. Today there's Apple Computer. It's designed to be a *personal* computer. To uncomplicate your life. And make you more effective.

It's a wise man who owns an Apple.

If your time means money, Apple can help you make more of it. In an age of specialists, the most successful specialists stay away from uncreative drudgery. That's where Apple comes in.

Apple is a real computer, right to the core. So just like big computers, it manages data, crunches numbers, keeps records, processes your information and prints reports. You concentrate on what you do best. And let Apple do the rest. Apple makes that easy with three programming languages—including Pascal—that let you be your own software expert.

Apple, the computer worth not waiting for.

Time waiting for access to your company's big mainframe is time wasted. What you need in your department—

on your desk—is a computer that answers only to you... Apple Computer. It's less expensive than timesharing. More dependable than distributed processing. Far more flexible than centralized EDP. And, at less than \$2500 (as shown), downright affordable.

Visit your local computer store.

You can join the personal computer revolution by visiting the Apple dealer in your neighborhood. We'll give you his name when you call our toll free number

(800) 538-9696. In California, **(800) 662-9238.**

The New Tandy 3000

The difference is power...and affordability.

Introducing the Tandy 3000 personal computer, the affordable alternative to the IBM® PC/AT. Here's the power you need to manage your business, to network computers, or to create a multiuser system.

Unmatched Compatibility

The Tandy 3000 uses the advanced MS-DOS 3.1 operating system. And since the Tandy 3000 is compatible with programs designed for the PC/AT, as well as the PC/XT, it cuts through today's software confusion. Choose from literally thousands of powerful applications.

Power to Share

The Tandy 3000 is designed to use the forthcoming XENIX 5.0 multi-user operating system. Two to six people can share the 3000's high

speed and storage from low-cost data terminals. The Tandy 3000 is network ready, too.

High-Performance Design

The Tandy 3000 (25-4001, \$2599) operates at twice the speed of the industry standard, has 512K of main memory (expandable to 640K on the main board), a high-capacity floppy disk drive, a serial/parallel adapter and ten expansion slots.

Or choose the Tandy 3000 HD (25-4010, \$3599) with a built-in 20-megabyte hard disk drive for fast access to volumes of data.

The Tandy 3000 has the power to put you in command. Ask for a demonstration at your nearest Radio Shack Computer Center.

Available at over 1200 Radio Shack Computer Centers and at participating Radio Shack stores and dealers.

"My own IBM computer. Imagine that."

One nice thing about having your own IBM Personal Computer is that it's *yours*. For your business, your project, your department, your class, your family and, indeed, for yourself.

Of course, you might have thought owning a computer was too expensive. But now you can relax.

The IBM Personal Computer starts at less than \$1,600* for a system that, with the addition of one simple device, hooks up to your home TV and uses your audio cassette recorder.

You might also have thought running a computer was too difficult. But you can relax again.

Getting started is easier than you might think, because IBM has structured the learning process for you. Our literature is in *your* language, not in "computerese." Our software *involves* you, the system *interacts* with you as if it was made to—and it was.

That's why you can be running programs in just one day. Maybe even writing your *own* programs in a matter of weeks.

For ease of use, flexibility and performance, no other personal computer offers as many advanced capabilities. (See the box.)

But what makes the IBM Personal Computer a truly useful tool are software programs selected by IBM's Personal Computer Software Publishing Department. You can have programs in business, professional, word processing, computer language, personal and entertainment categories.

You can see the system and the software in action at any ComputerLand® store or Sears Business Systems Center. Or try it out at one of our IBM Product Centers. The IBM Data Processing Division will serve those customers who want to purchase in quantity.

Your IBM Personal Computer. Once you start working with it, you'll discover more than the answers and solutions you seek; you'll discover that getting there is half the fun. Imagine that.

IBM PERSONAL COMPUTER SPECIFICATIONS *ADVANCED FEATURES FOR PERSONAL COMPUTERS		
User Memory 16K - 256K bytes*	Display Screen High resolution (720h x 350v)*	Color/Graphics Rear mode 16 colors*
Permanent Memory (ROM) 40K bytes*	80 characters x 25 lines Upper and lower case	256 characters and symbols in ROM*
Microprocessor High speed, 8088*	Green phosphor screen*	Graphics mode 4-color resolution: 320h x 200v*
Auxiliary Memory 2 optional internal diskette drives, 5 1/4", 160K bytes per diskette	Diagnostics Power-on self testing* Parity checking*	Black & white resolution: 640h x 200v*
Keyboard 83 keys, 6 ft. cord attaches to system unit* 10 function keys* 10 key numeric pad Tactile feedback	Languages BASIC, Pascal	Simultaneous graphics & text capability
	Printer Bidirectional* 80 characters/second 12 character styles, up to 132 characters/line* 9 x 9 character matrix*	Communications RS-232-C interface Asynchronous (start/stop) protocol Up to 9600 bits per second

The IBM Personal Computer and me.

OUR NEXT CHAPTER:
OTTO JOINS UBER

CAREERS

CONTACT

OUR VISION

Rethinking Transportation

Otto is designing a new approach to modern transportation, starting with self-driving trucks.

Long-haul transit is vital for nearly 70% of the things we buy, yet hundreds of thousands of preventable trucking accidents happen each year on American highways. We believe it's our responsibility to bring safer, self-driving technology to the road.

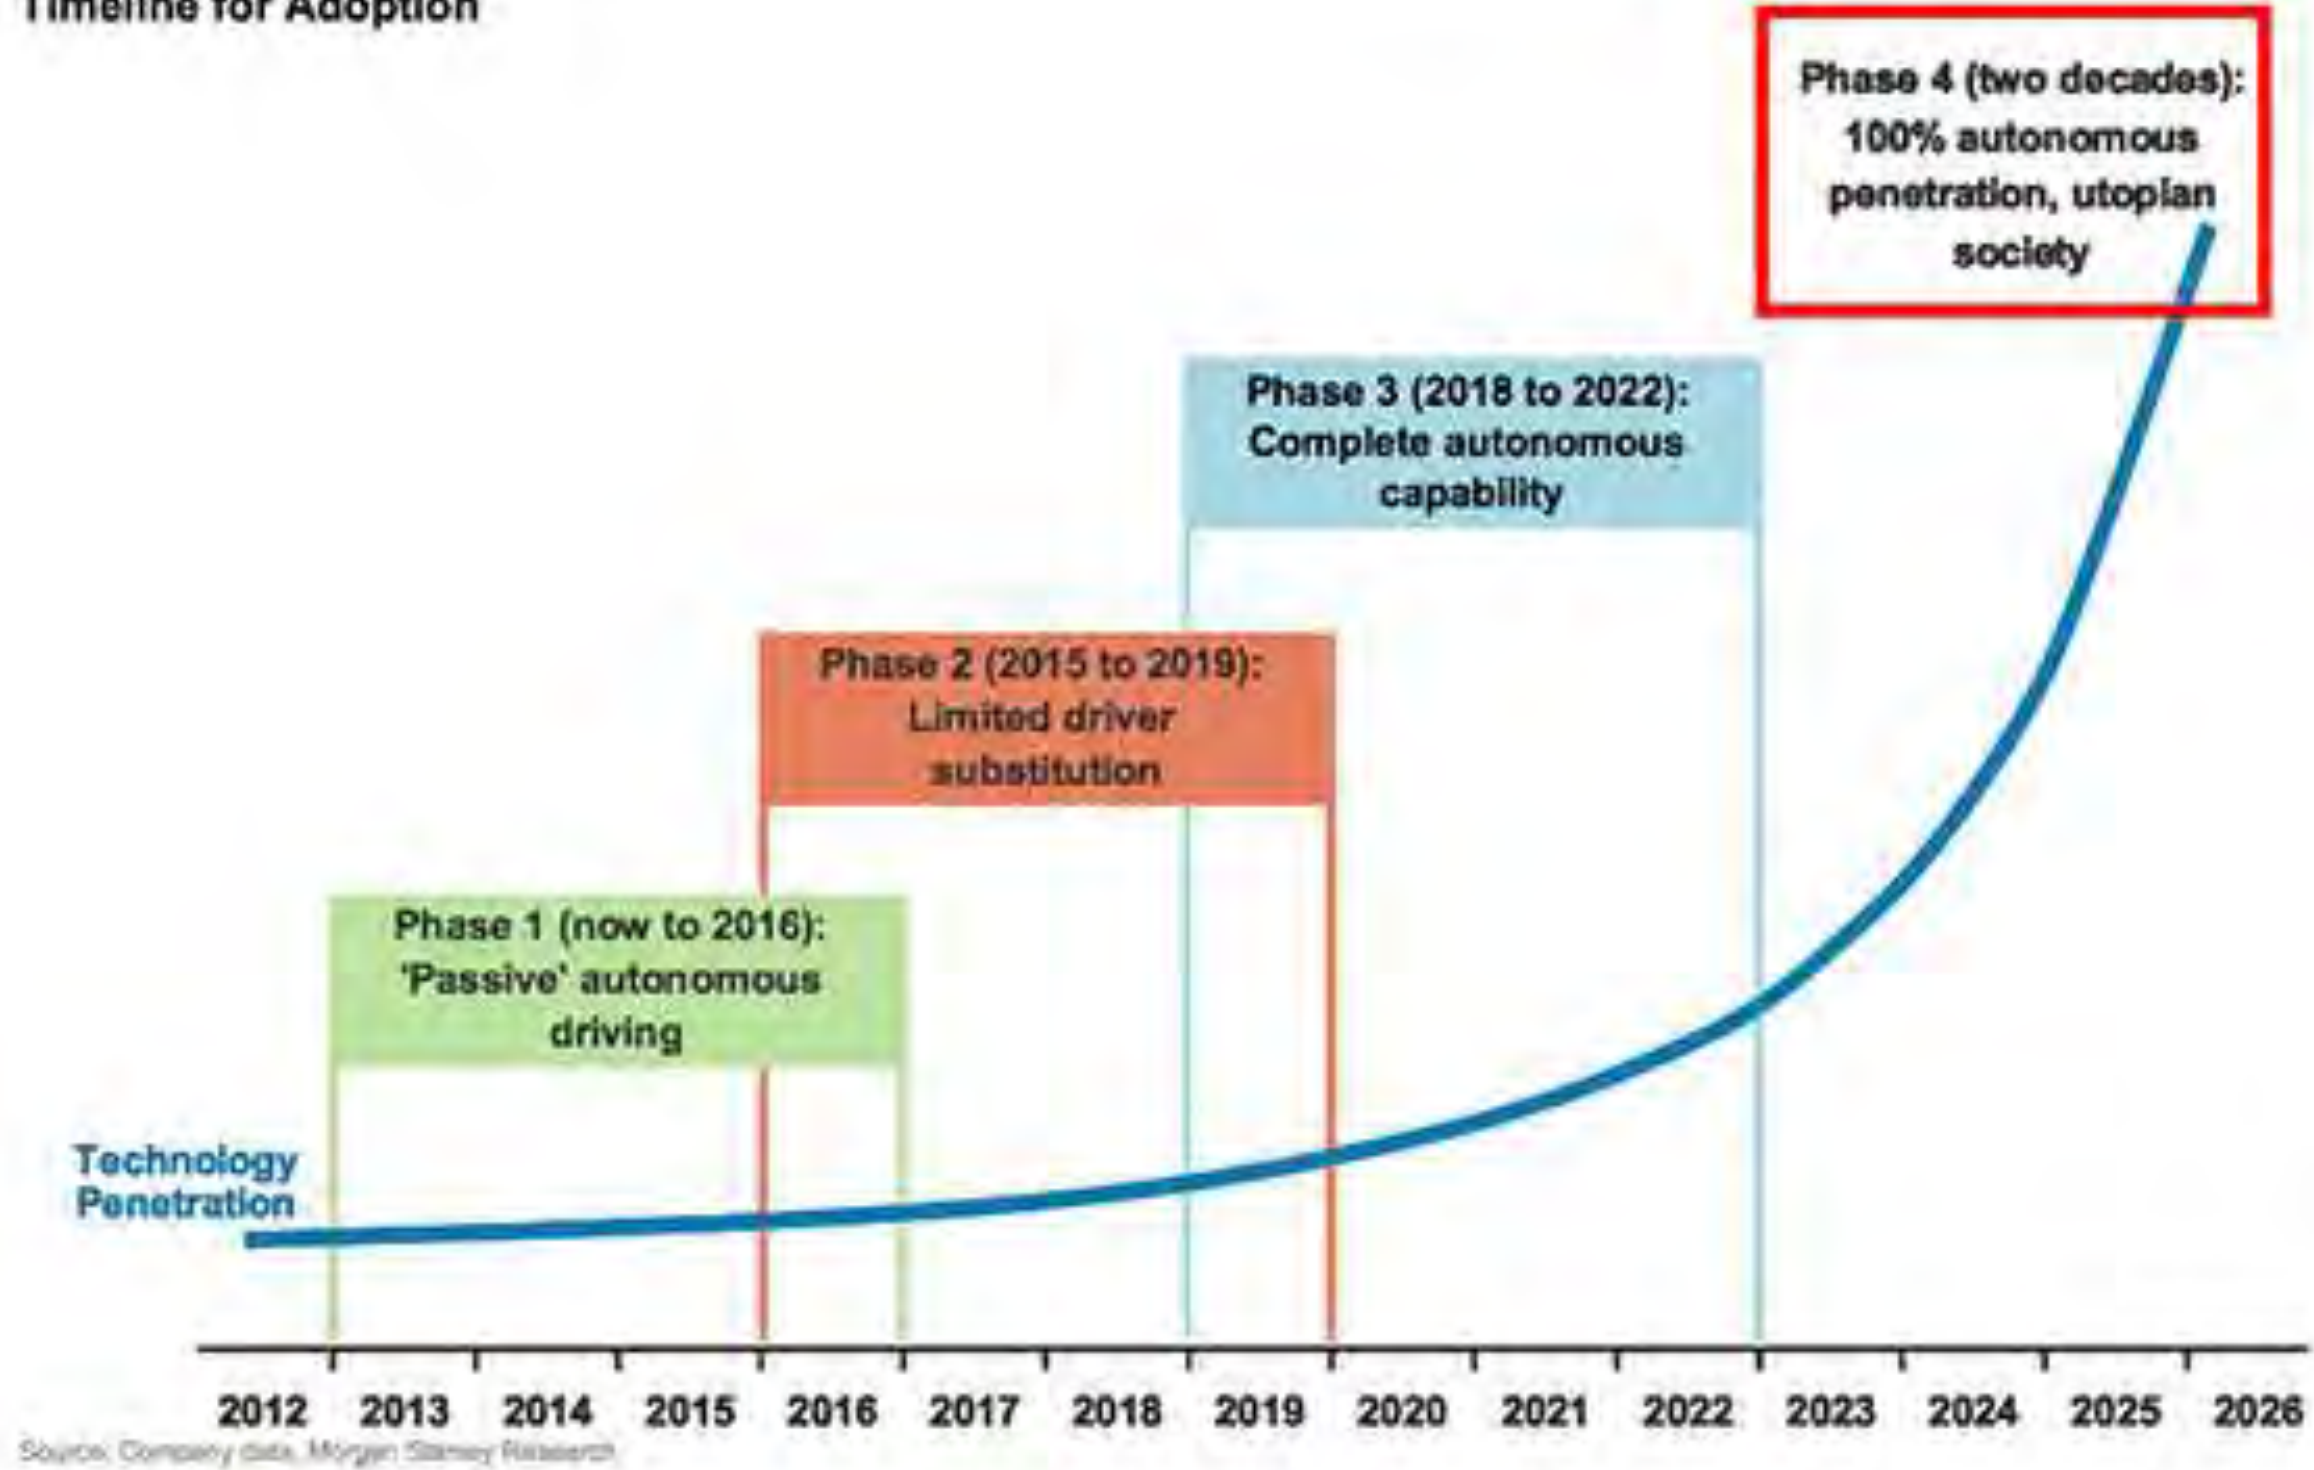

Exhibit 20
Timeline for Adoption

A 2013 study reports that work automation will put 47% of existing jobs in the U.S. at "high risk."

REPORT

AUGUST 6, 2014

AI, Robotics, and the Future of Jobs

BY **AARON SMITH** AND **JANNA ANDERSON**

Key Findings

The vast majority of respondents to the 2014 Future of the Internet canvassing anticipate that robotics and artificial intelligence will permeate wide segments of daily life by 2025, with huge implications for a range of industries such as health care, transport and logistics, customer service, and home maintenance. But even as they are largely consistent in their predictions for the evolution of technology itself, they are deeply divided on how advances in AI and robotics will impact the economic and employment picture over the next decade.

OPEN DATA

An aerial, high-angle view of a vast industrial warehouse. The floor is filled with hundreds of rows of pallets, each carrying stacks of boxes or materials. The perspective is from a high vantage point, looking down the length of the warehouse, which is supported by a grid of tall, dark structural columns. The lighting is somewhat dim, creating a sense of scale and depth. The word "INFRASTRUCTURE" is superimposed in the center of the image in a clean, white, sans-serif font.

INFRASTRUCTURE

A large, blurred crowd of people at night, with the text "HUMAN CAPITAL" overlaid in white. The background is a dense crowd of people, mostly seen from behind, with some individuals in the foreground wearing red and blue clothing. The scene is dimly lit, with some light sources visible in the background, creating a bokeh effect. The text is centered horizontally and vertically in a clean, white, sans-serif font.

HUMAN CAPITAL
